

# GILSONITE Maad mine

Gilsonite Maad mine has the highest quality natural bitumen in Iran, and it is one of the few natural bitumen mines with high purity in Iran.

# About Us

Over the years, Maad Mine has been able to maintain its position as one of the top producers of natural bitumen and its various products, while guaranteeing the highest quality. The mine's long-term plan is to continue to be the largest producer of bitumen while maintaining the highest quality.

Gilsonite Maad mine has a license of the Organization of Industries and Mines, number 12/8692, registered in 2005.

Also, Gilsonite Maad Mine has a brilliant history in the production and extraction of natural bitumen

Using experienced and expert personnel and the latest machines and using the latest technologies and extraction methods, it has become one of the top major producers of natural bitumen in the country.

# Our Goals

## GOAL 1

Certainly, Maad Gilsonite Group, with a professional view of the future, aims for quantitative and qualitative development in the field of extracting, selling natural bitumen and exporting mineral bitumen.

## GOAL 2

In the perspective of Maad Gilsonite company's future activities, it has a special place to be more present in the world markets, and we hope that with the serious will of the Maad mine complex personnel, a place worthy of the dignity of the country's natural bitumen mining industry will be provided.

# Product Overview

Gilsonite is an asphaltite rock and a type of solid hydrocarbon bitumen that occurs naturally. Natural gilsonite is usually classified as natural asphalt compared to heavy oil asphalt, which is also called asphaltite, unitite, and asphaltum.

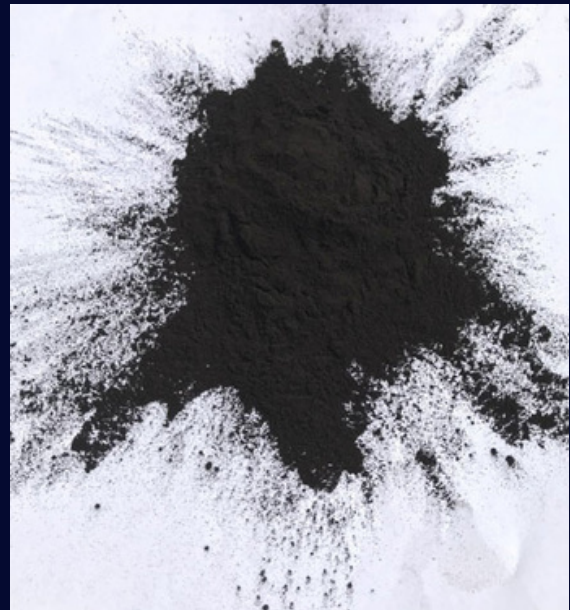

This product is a natural hydrocarbon resin with many properties that is used in asphalt and even ink and printing ink.

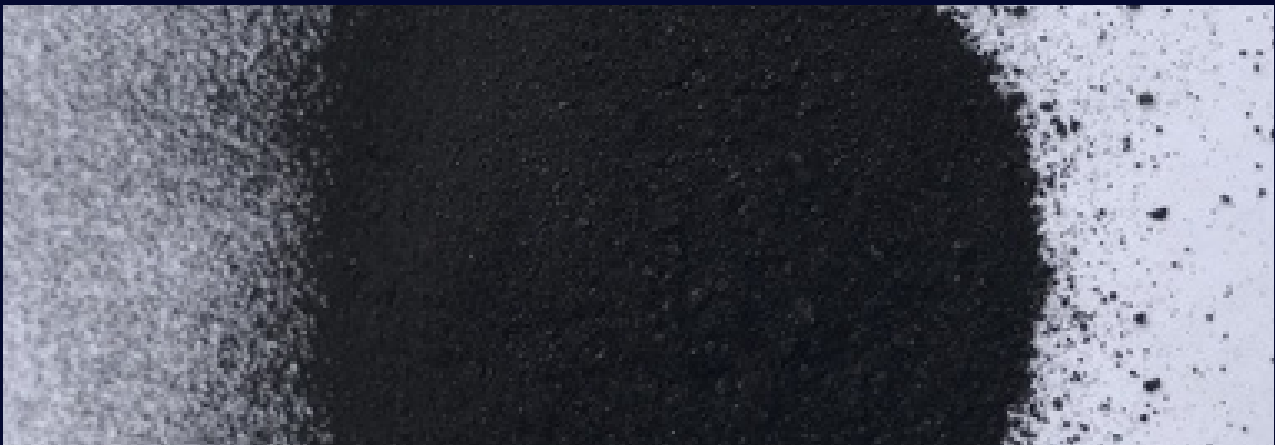

And it is used in more than 160 products from types of drilling cement to chemical products, casting sand additives and a wide range of chemical products in different forms.

# Our Product

Gilsonite is extracted in the form of lumps, in order to customer desire, it can be deliver to the customer in the form of granulation, micronized powder or in the form of lumps.

## Jumbobag packaging

GILSONITE HUNK WITH A PERCENTAGE BETWEEN 0 AND 25 PERCE.  
PACKING IN 1 TON JUMBO BAGS

## Paper pallet packaging

Granulated Gilsonate (granulated) with diameter of 30 to 40 mesh and ash between 0 and 25%.

Packaging:

1. Multilayer laminated bags (25kg  $\pm$ 5%)
2. Laminated paper bags(25kg  $\pm$ 5%)
3. Multilayer sacks(25kg  $\pm$ 5%)

Gill Sonat micronized powder with a diameter of 80-400 mesh gray between 0-25%

packing:

1. Multi-layer bags (25 kg  $\pm$  5%)
2. Laminated paper bags (25 kg  $\pm$  5%)
3. Multi-layer sacks (25 kg  $\pm$  5%)
